# Air 3.5 Template Update

## Transfer Justification Requirement

GMR Compliance and Revenue Cycle leaders have added the requirement of transfer justification verbiage to the GMR 3.5 ImageTrend template. The goal of this field is to capture the specific facility capabilities that the patient requires necessitating air transport.

The screenshot shows the 'Destination Info' section of the GMR 3.5 ImageTrend template. On the left, a red sidebar contains a menu with 'Transfer/Transport' and 'Destination Info'. The main form area is titled 'Destination Info' and includes a dropdown for '(Associated with Patient's Condition for This Transport):'. Below this is a 'Reason for Choosing' section with a red exclamation mark icon and a grid of six buttons: 'Closest/ Appropriate Facility', 'Insurance Status/ Requirement', 'Base Hospital Medical Direction', 'Patient's Choice', 'Physician's Request', and 'EMS Agency Policy'. The 'Destination:' field is currently empty. A text prompt asks the user to 'Please list the services required for this patient that are currently unavailable at the sending facility:' followed by a large text area with a red border and a 'Start typing here...' placeholder. At the bottom, there is a 'Type of Turn-Around Delay:' field with a red exclamation mark icon and a search box containing 'Find a Value...'.

## Kansas Specific Requirement: Mileage

The state of KS requires Air operators to document mileage in the form of nautical miles. We've made these fields required for KS licensed operations in the State tab.

- You can start at "0" for the first field and put your total NM flown with the patient on board in the second field.

The screenshot shows the 'State' tab of the GMR 3.5 ImageTrend template. The left sidebar has a red header with 'State' and a menu item for 'KS'. The main form area is titled 'KS' and contains two required fields, each with a red exclamation mark icon. The first field is labeled 'From Beginning To Scene Mileage' and 'On-Scene Odometer Reading of Responding Vehicle:'. The second field is labeled 'From Scene To Patient Destination Mileage' and 'Patient Destination Odometer Reading of Responding Vehicle:'.
